

in computer science, a data structure is a collection of values and the relationships among them

a zine for  
valentinez day 2019

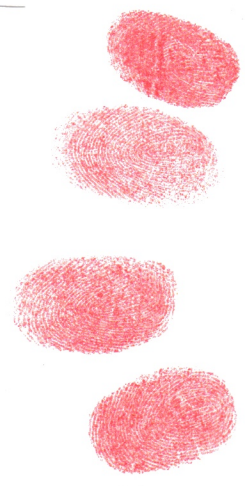

# TOP 3 ROMANTIC DATA STRUCTURES

## UNDIRECTED GRAPH

we have the capacity  
to touch and be  
touched

we can have as many connections as we want. we can be as isolated as we choose. our bonds and the strength of those bonds and the brittleness of those bonds are ours

thank you for encouraging me to make small, strange things

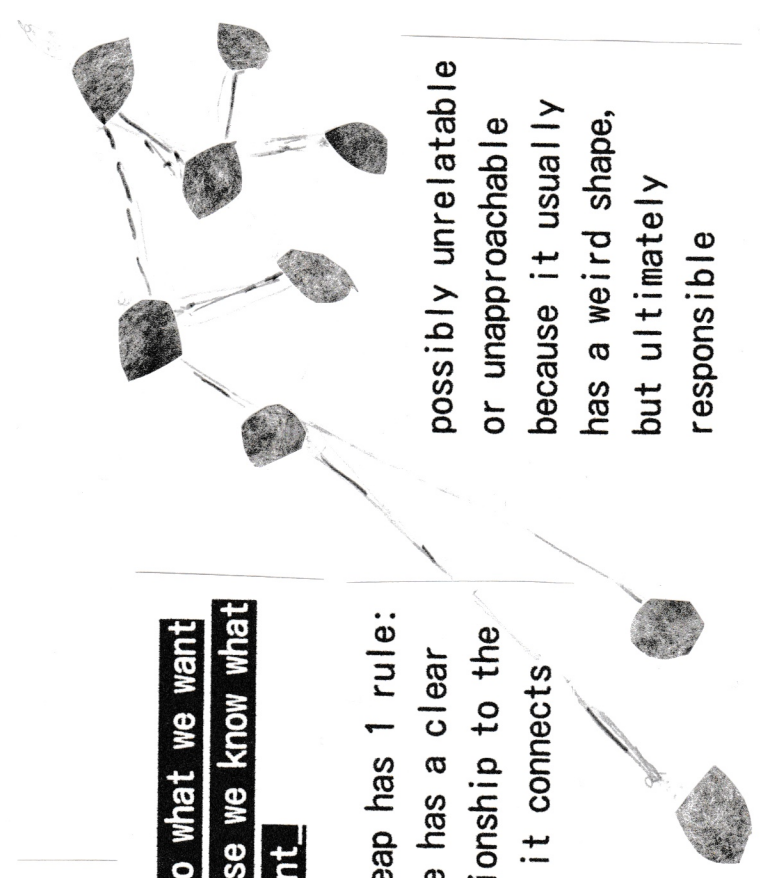

from @scumbling, for @objelisks, and the ever-growing, ever-strengthening, infinite web of connections of love we make and are making

## HASH TABLE

we are our own best  
tools for  
understanding  
ourselves

the hash table will tell you how it wants to be accessed, if you meet it halfway.

possibly unrelatable or unapproachable because it usually has a weird shape, but ultimately responsible

## HEAP

we do what we want  
because we know what  
we want

the heap has 1 rule: a node has a clear relationship to the nodes it connects

you and i speak the same language, you just need to get to know us.
